

The Epsom Skin Clinic

Laser Liposuction

The revolutionary alternative to liposuction

Laser Liposuction is an innovative concept in laser assisted liposuction, which targets areas of fat that are resistant to diet and exercise.

It is a minor procedure for body contouring which uses a fine cannula to deliver safely, powered laser to disrupt the fat cells causing them to break down. The fat deposits can then be removed using light suction. The Laser Liposuction treatment is performed under local anaesthetic, is permanent, safe and gives minimal downtime.

Advantages of Laser Liposuction

- Less Invasive
- Less Downtime
- Laser Skin Tightening

RESULTS IN JUST 2 WEEKS

OVER 100 PROCEDURES PERFORMED

Before **After**

Doctor led laser and aesthetics in the heart of Epsom...

Low Intensity Laser Therapy

The technology utilises superpulsed laser diodes to irradiate diseased or traumatic tissue with photons. These particles of energy are selectively absorbed by the cell membrane and intracellular molecules, resulting in the initiation of a cascade of complex physiological reactions, leading to the restoration of normal cell structure and function.

How long does a treatment take?
Treatments are typically thirty minutes to one hour in duration depending on the condition being treated.

Are there any side effects?
Unlike most pharmaceutical solutions and other therapeutic options, laser therapy is non-toxic, non-invasive and in over one million individual treatments, no significant adverse effects have been noted.

How many treatments are required?
The number of treatments will depend on the chronicity and the extent of the pathology involved. Based on the genetic makeup of the cells, an individual's response to LILT will vary to some degree. A recent clinical review, including
